

MISSION STATEMENT

Team: GoRobo #062

Colegiul Național „Emanuil Gojdu” din Oradea

Computers and robots will rule over the world in less time than we probably imagine. Being anxious to contribute to an easier and more exciting future, we are honored to take part in making the world a better place.

Our team strongly believes in values that define us as a futuristic society: teamwork, passion and last but not least, the will to never give up on our dreams. First Tech Challenge give us just the occasion to put our value to the test.

Participating in this competition not only makes us stronger as a team, but improves individual skills as well: our knowledge of artificial intelligence, basic Mathematics and Physics used to understand the way our world functions, Informatics at a quite high level and many other domains.

We know this experience will be a valuable lesson for our development and we are hoping to overcome any obstacle on the way with a smile on our faces, realising that we are the future. After all, we are building it!

We want to emphasize how grateful we are for the opportunity provided to us by this competition and extend our appreciation. The values promoted by FTC are wonderful and we are happy to spread them even further!

We are looking forward to having a graciously profesional competition!
